Differential pressure relief controller AVPA (PN 16 and PN 25)

Description

AVPA (PN 16)

AVPA (PN 25)

AVPA is a self-acting differential pressure relief controller primarily for use in district heating systems. The controller is normally closed and opens on rising differential pressure.

The controller has a control valve, an actuator with one control diaphragm and handle for differential pressure setting.

Main data:

- DN 15-50
- k_{vs} 4,0-25 m³/h
- PN 16, 25
- Setting range:
0,05-0,5 bar / 0,2-1,0 bar / 0,3-2,0 bar
- Temperature:
 - Circulation water / glycolic water up to 30 %: 2 ... 150 °C
- Connections:
 - External thread (weld-on, thread and flange tailpieces)
 - Flange

Ordering

Example:
Differential pressure relief controller,
DN 15, k_{vs} 4,0; PN 25; setting range
0,2-1,0 bar; T_{max} 150 °C; ext. thread

- 1x AVPA DN 15 controller
Code no: **003H6602**

Option:

- 1x Weld-on tailpieces
Code no: **003H6908**

The controller will be delivered
completely assembled, inclusive
impulse tubes between valve and
actuator.

Application principle

Installation positions

Up to medium temperature of 100 °C the controllers can be installed in any position.

For higher temperatures the controllers have to be installed in horizontal pipes only, with a pressure actuator oriented downwards.

Pressure temperature diagram

Sizing

Given data:

$$Q_{\max} = 4,5 \text{ m}^3/\text{h}$$

$$\Delta p_{\text{AVPA}} = 1,4 \text{ bar}$$

Nominal pressure PN 25

k_v value is calculated according to formula:

$$k_v = \frac{Q_{\max}}{\sqrt{\Delta p_{\text{AVPA}}}} = \frac{4,5}{\sqrt{1,4}}$$

$$k_v = 3,8 \text{ m}^3/\text{h}$$

Solution:

The example selects AVPA PN 25 DN 15, k_{vS} value 4,0 with differential pressure setting range 0,3-2,0 bar.

Design

1. Valve body
2. Valve insert
3. Pressure relieved valve cone
4. Valve stem
5. Control diaphragm for diff. pressure control
6. Setting spring for diff. pressure control
7. Handle for diff. pressure setting, prepared for sealing
8. Union nut
9. Upper casing of diaphragm
10. Lower casing of diaphragm
11. Impulse tube
12. Compression fitting for impulse tube
13. Actuator

Function

The pressures in front and behind of the control valve are being transferred through the impulse tubes to the actuator chambers and act on control diaphragm. Control valve is normally closed. It opens on rising differential pressure and closes on falling differential pressure to maintain constant differential pressure.

Controller is equipped with excess pressure safety valve, which protects control diaphragm for diff. pressure control from too high differential pressure.

Settings

Differential pressure setting

Differential pressure setting is being done by the adjustment of the setting spring for differential pressure control. The adjustment can be done by means of spring for differential pressure setting and/or pressure indicators

Adjustment

Relation between scale figures and differential pressure. Values given are approximate.
